

## SSD Installation Note

### Required Tools for Installation

1. Traveltek M13
2. NGFF interface (M2) 42mm \* 22mm solid state hard drive SSD up to 500GB
3. Screw Driver

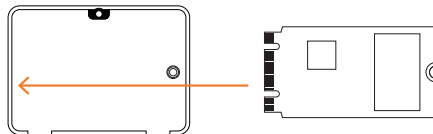

*Before attempting installation; we must first activate the Windows 10 operating system and then proceed with power shutdown.*

**Step 1:** Unscrew and open the SSD Cover from "D" body.

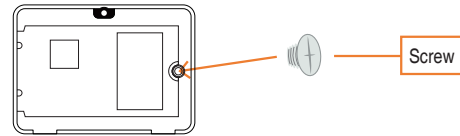

**Step 2:**

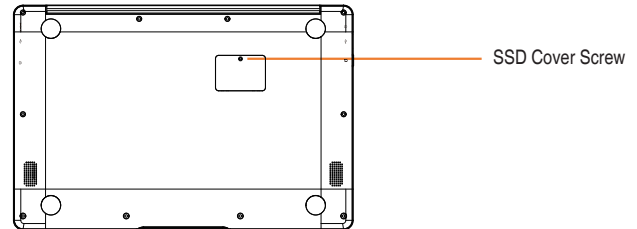

A) Plug the SSD hard drive into the slot.

B) Use one screw to fix SSD with device properly.

**Step 3:** Fix the SSD cover and tighten the screw properly.

**Note:**

- The SSD is for storage only. Please do not install OS.
- When any new SSD is installed, format it before using it for the first time.
- If you are connecting old/used SSD drive in this device, the data/partition inside the SSD may not be accessible.
- When any new SSD is connected, it may not detect/work for the first time and you may need to restart the device again to have it work properly.
- The USB power in this device is shared among all USB ports and internal HDD/SSD. When additional SSD is connected, there may be chances of issues like slow/jerky cursor movement while using Pen drive, USB mouse or any other USB devices.
